RE: Revegetation Sampling for Utah International, Inc.,  
ACT/021/001, Conducted by Steve Cox

During June 1984, Steve Cox conducted a sampling program on Utah International's Cedar City minesite to determine revegetation success of the Company's reclamation efforts (see Memo to File, ACT/021/001, July 10, 1984).

Steve performed an exemplary job in researching the mining and reclamation history, coordination with the Company, conducting the sampling and analyzing and summarizing the results of his research and data collection. This is one of the first examples I have seen of the MLR technical staff performing quantified field work which benefits both the State as well as industry and Steve is to be commended for performing such an excellent job.
